

Double Disk Refiner RDD

The DOUBLE DISK REFINER RDD is installed in stock preparation plants to improve fibers characteristics in order to get a better sheet formation and enhance its properties.

Produced thanks to the agreement with AGA and consequently with already 50 years of experience in design and manufacturing of such equipments, our DOUBLE DISK REFINER RDD is equipped with pneumatic positioning system for the disks and is complete with an electropneumatic control system for proper working.

Manufactured in different sizes (disks from 17" to 31") depending on fibers characteristics, production of the plant and freeness to be obtained, the DOUBLE DISK REFINER RDD is designed for easy setting and maintenance.
