

OMMASCREEN OS

The OMMASCREEN is a centrifugal type cleaning machine operating at medium consistency (3 – 3,5%) in stock preparation plants using waste paper. The OMMASCREEN has been designed combining the Nuova Omma experience in manufacturing simple and reliable screens with highly technological components (rotor and basket) in order to improve stock cleaning. With the possibility to use different rotor/basket combinations according to plant features and cleaning targets, the OMMASCREEN can be successfully installed also as primary screen in approach flow systems and as secondary screen for rejects handling of existing machines..
