

TURBOWASHER TL

The TURBOWASHER TL is an auxiliary machine for continuous cleaning of pulpers and for the treatment of the Turboseparator light rejects.

In both installations the TURBOWASHER TL increases the productivity of the main units (for instance reducing shut down time for pulper cleaning), optimizes fiber recovery and discharges contraries after washing to other auxiliary machines (Rotating screen, Thickening screws).

The TURBOWASHER TL is equipped with an electro-pneumatic control panel with PLC for working cycle control and is designed for easy setting and maintenance.
